

IMPORTANT MESSAGE FROM PENNSYLVANIA AMERICAN WATER

Dear Customer,

This is an important notification from Pennsylvania American Water. We will be in your area beginning next week to assess the type of material our customers' water service lines are made of. Water service lines connect our water main to your home or property and can be made of copper, plastic, galvanized steel or lead. If you have already responded to our service line material survey, thank you for your response. If you have not responded, please do so today at <https://tinyurl.com/pawcsurvey>. If you do not respond, we may contact you or come to your door. All Pennsylvania American Water representatives will carry official company photo I.D. badges and wear logoed, high visibility vests. Your assistance is very important in helping us meet the goal of identifying and replacing lead service lines. If you are a Landlord, please forward this information to your tenants. For more information, visit [Pennsylvaniaamwater.com](https://pennsylvaniaamwater.com) or call our project contractor CDM Smith at 717-581-8599.
